

# Where to Start

Learn where to start, what HTML and CSS are, and how to use them to make a web page.

**You don't know what HTML files or HTML tags are, or why they are needed:**

See [what HTML is](#) to learn how files, tags and attributes make up HTML.

**You know that you need a HTML file, but don't know what to put in it:**

See which [essential tags](#) are needed to create your first web page.

**You have created a page, but it looks empty and you want to add things to it:**

View some [examples](#) or see some [basic tags](#) that you can add.

**Your new page looks a little dull or boring, and you want to get creative:**

Find out how [style sheets](#) or [text formatting tags](#) can change how elements look.

**Your blog has some text and a few links, but you want to display something neatly:**

Check out how [lists](#) or [tables](#) can be used to structure data on a page.

**You've heard about HTML, but don't know what CSS is or where it fits:**

See [What is CSS](#) to learn how style sheets can change how a page looks.

**You've been shown some HTML code, and want to understand the tags used:**

See the [HTML Cheat Sheet](#) to learn how style sheets can change how a page looks.
